

# AI Prompt Documentation

## Mini Project: Lovable.dev Market Analysis

Complete record of all AI prompts used across the project

June 2026

**Purpose of This Document**

This document records every AI prompt used across all 6 research days plus the final synthesis and presentation generation, in the order they were used. Submitted to satisfy the Assignment Step 8 requirement for AI prompt documentation, carrying 20% of the evaluation weight.

## Tool Summary

| Tool          | Used For                                           | Plan        |
|---------------|----------------------------------------------------|-------------|
| Perplexity AI | Web research — Days 1 to 5                         | Free        |
| Claude AI     | PM recommendations synthesis — Day 6, Final Report | Free        |
| SimilarWeb    | Traffic and digital strategy data — Day 3          | Free export |
| SEMrush       | SEO keyword data — Day 3 (SpyFu alternative)       | Free tier   |
| Gamma AI      | Presentation generation — final slides             | Free        |

## Day 1 — Company Background

### Tool: Perplexity AI

#### Prompt 1

Research Lovable.dev company completely. Cover: 1. Founding year and founders names 2. Funding history with amounts and dates 3. Business model - how do they make money 4. Revenue model - pricing tiers 5. Target customers - who uses it 6. Geographic focus - which countries 7. Key milestones 2024 to 2026. Use only recent sources from 2025-2026. Cite all sources with links.

#### Prompt 2 — Follow-up

Now tell me: 1. Who founded Lovable - their background 2. How did it grow so fast 3. What is their long term vision

## Day 2 — Product Analysis

### Tool: Perplexity AI

### Prompt 1

Analyze Lovable.dev's core product deeply. Cover: 1. What exact problem does it solve? 2. Core value proposition in one line 3. Key features that differentiate it 4. How is it different from Cursor and Replit? 5. Who is the primary target user? 6. What is their pricing strategy logic? Use only 2025-2026 sources. Cite all links.

## Day 3 — Digital Strategy

---

### Tool: SimilarWeb (Free Export) + Perplexity AI

#### SimilarWeb

Action: Generated free PDF export of Lovable.dev traffic analysis for the period February to April 2026, covering total visits, channel breakdown, geography, and engagement metrics. No prompt required — direct data export from website analysis tool.

### Prompt 1 — Perplexity

What is Lovable.dev content marketing and SEO strategy in 2025-2026? What partnerships have they built? How do they acquire users organically? What is their social media presence on YouTube, X Twitter, and LinkedIn? Cite all sources from 2025-2026.

#### Tool Substitution Note

SpyFu was identified as a fully paid tool with no free tier available. SEMrush free tier and Perplexity AI were used as documented alternatives for keyword and SEO competitive data, as transparently noted in the Day 3 deliverable and AI Workflow Documentation.

## Day 4 — Ecosystem & Growth Strategy

---

### Tool: Perplexity AI

#### Prompt 1

What is Lovable.dev's product ecosystem and growth strategy in 2025-2026? Cover: 1. What integrations and partnerships have they built? 2. Do they have a developer API or platform strategy? 3. How are they building community? 4. What are signals of their future product roadmap? 5. How are they expanding beyond their core product? Cite all sources from 2025-2026.

## Day 5 — Competitive Analysis

---

### Tool: Perplexity AI + Miro (Free)

#### Prompt 1

Compare Lovable.dev with its top 5 competitors in 2025-2026: Cursor, Replit, Bolt.new, Bubble.io, Webflow. For each competitor cover: 1. Core positioning 2. Target user 3. Key differentiator vs Lovable 4. Pricing model 5. Biggest weakness vs Lovable. Use sources from 2025-2026.

## Miro

Action: Built a 2x2 visual positioning matrix manually in Miro using data from Prompt 1 above. X-axis: Technical skill required. Y-axis: Price. No additional AI prompt required — direct visual mapping exercise.

# Day 6 — PM Recommendations

---

## Tool: Claude AI

### Prompt 1

I am an AI PM student analyzing Lovable.dev for IIT Madras assignment. I have personally used Lovable to build 10 AI projects. Based on my research give strategic PM recommendations covering: 1. Top 3 new features Lovable should build 2. One pricing change recommendation 3. One new user segment to target 4. One ecosystem development recommendation 5. One digital acquisition improvement 6. One India-specific recommendation (India traffic declining 19%). Be specific. Use real data. No generic advice. My personal pain points as Lovable user: credits run out fast, complex apps get errors, GitHub push was difficult, free tier too limited for real projects.

### Tool Substitution Note

Notion AI was identified as a fully paid tool. Claude AI was used as the documented alternative for synthesis and PM recommendation generation, producing equivalent or superior strategic output.

# Final Report — Consolidated Synthesis

---

## Tool: Claude AI

### Prompt 1

Consolidate all research from Days 1 to 6 (Company Background, Product Analysis, Digital Strategy, Ecosystem and Growth, Competitive Analysis, PM Recommendations) into a single professional corporate market intelligence report. Structure required: Executive Summary, Company Background, Product and Value Proposition, Digital Strategy Analysis, Product Ecosystem and Growth, Market Segment and Competitive Landscape, Strategic Insights, Product Manager Recommendations, AI Workflow Documentation. Requirements: English only, no informal language, no reflection sections, fully data-backed with cited sources, professional corporate tone suitable for portal submission.

# Presentation — Gamma AI

---

## Tool: Gamma AI

### Prompt 1 — Slide Structure and Content

Create a highly professional corporate-grade presentation for a Market Intelligence Report. Company analyzed: Lovable.dev. Theme: Dark navy blue with white text and electric blue accents. Style: consulting report style. 12 slides covering: Title, Executive Summary, Company at a Glance, Product and Value Proposition, Digital Strategy, Competitive Landscape, Competitive Threats, Growth Ecosystem, Strategic Insights, PM Recommendations, Conclusion, Thank You. [Full detailed slide-by-slide content provided separately per slide with headline, data points, and key insight per slide].

Prompt 2 — Interactive and Engaging Revision

Create a stunning, interactive, and engaging presentation for a corporate market analysis. Design rules: clean white background with bold color accents, one big number or stat per slide, minimal text, large bold headlines that tell a story, visual cards and color blocks instead of boring tables, conversational TED-talk tone instead of academic. [Full detailed slide-by-slide content with hooks, visual comparisons, and emotional story arc provided separately per slide].

Tool Limitations Encountered

| Day      | Limitation                                          | Resolution                                                           |
|----------|-----------------------------------------------------|----------------------------------------------------------------------|
| Day 1    | Perplexity Deep Research mode is paid only          | Used Web search mode with 2 follow-up prompts for equivalent depth   |
| Day 3    | SpyFu is fully paid, no free tier available         | Used SEMrush free tier and Perplexity as documented alternatives     |
| Day 3    | SimilarWeb free export has limited historical range | Used Feb-Apr 2026 window which was sufficient for analysis           |
| Day 6    | Notion AI is fully paid                             | Used Claude AI and Google Docs as documented alternatives            |
| All days | Perplexity free tier has search rate limits         | Spread research across 6 separate focused sessions                   |
| All days | Risk of AI citing non-existent sources              | Every cited source manually verified by clicking through to original |
